Economic Modernisation Vision Executive Program
(2023-2025)
The vision is clear, and the only way forward is through action and achievement to build a new Jordan—a modern state rooted in participation, active citizenship, the rule of law, and dedicating all available resources to development; a state led by its young men and women, with their limitless aspirations and relentless resolve.

Abdullah II bin Al-Hussein
Speech from the Throne
Opening the Second Ordinary Session of the 19th Parliament
November 13, 2022

The Economic Modernisation Vision is an essential pillar within the course of comprehensive reform called for by His Majesty King Abdullah II Ibn Al-Hussein with the goal of unleashing national potential in various sectors. An effort to forge inclusive and sustainable growth that ensures creating job opportunities for Jordanians and ensuring a better quality of life for citizens. The Speech from the Throne at the Opening of the Second Ordinary Session of the 19th Parliament contained clear Royal directives for the government to move forward with the reform process and emphasized the importance of the Economic Vision in attracting investment, supporting economic growth, and providing job opportunities for young Jordanians over the next decade.

The Vision included key principles for drawing a clear roadmap for the future of Jordan, in which the private sector would play a pivotal role in the economic activity, based on two strategic pillars: accelerated economic growth and improved quality of life for all citizens, while sustainability is a cornerstone of this Vision in an effort to achieve the national priority goals, with the overarching goal of generating one million new jobs for Jordanians in the labor market.

The Executive Program for the Economic Modernisation Vision (2023-2025) reflects the government’s commitment to delivering the Modernisation Vision as a key pillar in the comprehensive modernisation process led by His Majesty the King in its three political, economic and administrative spheres, including initiatives, projects, legislation and priority procedures in the various development sectors, which all relevant ministries and institutions will put into practice within the timelines contained therein. The Executive Program for the Economic Modernisation Vision (2023-2025) serves as a starting point for subsequent Executive Programs, thereby paving the way for achieving targets related to growth, job creation, investment and partnership with the private sector.

The Program comes in light of the exceptional economic and financial challenges experienced by Jordan due to global crises, external shocks and their aftermath on the economic sectors. Its development has also coincided with the completion of the Fifth
Review of the Economic Reform Program developed by the Government of Jordan and supported by the International Monetary Fund (IMF). A review that commended Jordan’s reform approach and the prudence of its fiscal and monetary policies, while maintaining future growth projections of economic performance within the present levels under these exceptional circumstances.

The Executive Program, which is complemented by the Public Sector Modernisation Roadmap, features (183) initiatives as part of the Vision’s eight drivers (High Value Industries, Future Services, Destination Jordan, Smart Jordan, Sustainable Resources, Invest Jordan, Green Jordan, and Vibrant Jordan), adopted according to the readiness and availability of funding, taking into account the alignment with the economic reforms matrix, sustainable development goals, and contribution to providing added value for growth and employment, and enhancing partnership with the private sector. The total cost of the program is estimated at JD2.3 billion for the entire duration of the Program of 2025. The Program also included the review, amendment and approval of legislative packages and action plans to improve Jordan’s ranking in international indicators and reports.

The Executive Program is featured by including initiatives associated with women’s economic empowerment, including legislative reviews and measures to improve Jordan’s ranking in the Global Gender Gap Index, as well as further implementing of the action plan related to improving Jordan’s ranking in the Women, Business, and the Law Report, and in addition to developing a national index to monitor and track women’s economic participation.

In developing the Executive Priorities Program, the government has pursued the same participatory approach of the Vision’s development process. Whereas sectoral task forces were formed, whose membership includes the public sector, along with representatives of the private sector and experts from different sectors and were key to the development process in reviewing the Vision’s document and its proposed initiatives, aligning them with the sectoral strategic plans and elaborating the final output of the Vision’s Executive Program in a form that reflects the goals and aspirations of the Vision.

Moreover, the Executive Program as a living and flexible document will be subject to annual revision and assessment in line with the government’s economic developments and priorities. As such, it includes a specific timeframe for implementation, clear indicators to measure performance, and an online system to monitor progress.
The Jordanian economy has achieved positive outcomes during the period (2000-2009), as this was due to the growth in national exports, increase in foreign investments and rise in the pace of remittances from Jordanian expatriates, resulting in an average growth rate of 6.5% then.

On the contrary, the economic growth rate during the period (2010-2021) has dropped to an average of 2.1% only. This intense drop was a result of various reasons, including the global financial and economic crisis in 2009, the state of insecurity in the region in 2011 and the subsequent influx of nearly 1.3 million Syrian refugees into the Kingdom, the consequent strain on public finances and essential government services such as, health, education, transport, water, sanitation, and others, as well as the impact of COVID-19 pandemic.

Afterwards, in 2021, the national economy has shown a noticeable trend for recovery from its pandemic-induced 1.6% drop in 2020. This was driven by several measures taken by the government in the health sector, monetary and financial measures taken to reduce the impact of the pandemic, such as lifting lockdown protocols and allowing economic sectors to operate. All of which resulted in achieving a positive growth reaching 2.2%, as this positive trend remained until mid-2022, with a growth rate of up to 2.7% compared to 1.8% during the same period in 2021.
The national economy has faced different shocks over the past decade which have led to a change in the structure of the economy in general. In terms of supply, the real estate sector ranked second with regard to its contribution to the real economic growth rate (0.28%, or around 12.2% of the real growth rate of 2.3%) during the period 2009-2021, preceding important sectors such as transport and trade. While in terms of demand, the private consumption expenditure expanded, due to the influx of nearly 1.3 million Syrian refugees into the Kingdom, as this was at the expense of government consumption expenditure and gross capital formation. However, the relative importance of net exports to GDP improved. Accordingly, there is a pressing need for further economic diversification and transition towards an economy that is more dependent on productive sectors for its growth and capable of creating exportable goods and services.
During the period from 2010 to 2019, moderate inflation rates were recorded reaching an average of 2.5%, despite the liberalization of petroleum products prices in 2012 and having petroleum prices trending towards increase during that period and the period after. Also, the inflation rate fell to 0.3% in 2020 due to the drop in domestic demand and global prices as a result of COVID-19 pandemic’s lockdown, this inflation rate then rose again to reach 1.4% in 2021 as the growth rates have gone up to what they were (pre-pandemic levels). In 2022, as the global inflationary pressures broadened owing to the rise in food and energy prices, the annual inflation rate surged from 2.5% in January to 5.2% in October 2022, thereby increasing the average inflation rate to 4.1% during the first ten months of the same year.

Inflation Rate Trend

Average Inflation Rate (2010-2020) 2.5%
Public Finance Sector

- **General Budget**: The general budget suffers from a chronic deficit, reaching record levels of about 8.1% of GDP (including grants) in 2012, as this was mainly due to the decline in total revenue growth rate, with relative stability in expenditures. The various fiscal reforms in subsequent years, especially in the tax system, had a major impact on the stability of public finance indicators which caused a drop in the budget deficit to reach 2.4% of GDP in 2018. However, the financial impact of COVID-19 pandemic pushed the budget deficit up to 7% of GDP in 2020. While in 2021, because of the economic recovery, the government was able to achieve the General Budget Law targeted projections for domestic revenues, reducing the actual budget deficit to 5.4% of GDP. Also, during the first half of 2022, deficit (including grants) reached 5.2%, compared to 5.4% for the same period in 2021.

Deficit Including Grants | Deficit to GDP
- **Public Debt:** The persistent deficit in the general budget resulted in a public debt average of 74.7% of GDP in the period (2011-2020). The highest percentage of public debt during this decade was in 2020, when it reached 84.5% and that resulted from the impact of COVID-19 pandemic on the budget, in addition to financing the deficit of the Water Authority of Jordan and installments of outstanding loans guaranteed to the National Electric Power Company which are considered extra burdens on the financial debt. Public debt kept increasing until it reached 88.6% in 2021, after excluding debt holding by the Social Security Investment Fund (SSIF).

Based on the available figures for the first half of 2022, upward trends are seen in the debt-to-GDP ratio amid heavy pressures on the general budget. Despite of the challenges related to the budget deficit and public debt levels, the government was able to meet the requirements of the (Economic Reform Program 2020-2024) while maintaining the Kingdom’s credit rating granted by global rating agencies and that was regardless of the economic conditions experienced by all countries in the world.

### Total Public Debt, excluding SSIF

![Graph showing total public debt excluding SSIF from 2011 to 2022](image-url)
Monetary Sector

During the period (2010-2020), the monetary sector has shown positive outcomes, represented by maintaining comfortable levels of foreign reserves that are enough to cover imports of goods and services for an average of 7.2 months, i.e., two times higher than the international standard. Furthermore, the total balance of foreign reserves reached around USD15.9 billion at the end of 2020, compared to USD13.0 billion at the end of 2010. The banking sector deposits increased by 5.6% annually, on average, to reach around JD36.8 billion at the end of 2020, compared to JD22.5 billion at the end of 2010.

Credit facilities for all economic sectors have also gone up by an annual average of 7.2%, reaching JD28.6 billion by the end of 2020, compared to JD14.5 billion by the end of 2010. Domestic liquidity has recorded an average growth of 5.8% per year, equivalent to JD37.0 billion at the end of 2020, compared to about USD22.3 billion at the end of 2010. Going to 2021, the monetary sector maintained its positive indicators, with the total foreign reserves balance recording comfortable and high levels of around USD18 billion, deposits increasing by 7.4%, credit facilities by 4.9%, and domestic liquidity increasing by 6.7%. In the first ten months of 2022, the monetary sector indicators maintained a good performance, demonstrating trust in monetary policy, a solid banking sector, as well as a vision to a stable outlook for the Jordanian economy.

Foreign Trade

Due to its small size and its openness to the outer world, the Jordanian economy is affected by changes in both the external economies in general, and economies of our trade partners in specific. Jordanian economy faces many challenges too, including those associated with the lack of primary resources, political circumstances of surrounding countries, as well as the recent impact of the COVID-19 pandemic, which had effects that extended to reach the global trade.

- Trade in Goods: Over the past two decades, foreign trade in goods accounted for nearly 80% of the Kingdom’s GDP on average, while imports accounted for most of the trade in goods within the weak industrial base and the heavy reliance on the outer world for the provision of various types of goods and production inputs. Consequently, the trade balance endures a chronic deficit, which has averaged 33% of GDP annually in the last two
decades. Nonetheless, the deficit decreased to 21.0% in 2020 and 26.6% in 2021 due to a greater decline in imports values against the decline in exports values, and that was a result of COVID-19 pandemic, but rates reverted back to their levels in the first half of 2022.

Comparing the first half of 2022 against the same period in 2021, total exports of the Kingdom increased by 43.4%, reaching JD4,329.8 million. This was the result of a 45.5% increase in national exports, reaching JD3961.0 million, and a 24.8% increase in re-exported goods, reaching JD368.8 million.

Imports also increased during the first half of 2022 by 38.6% compared to the same period of 2021, reaching JD9373.9 million.

Accordingly, the trade balance deficit (which accounts for the difference between imports and total exports) widened in the first half of 2022 to 34.6% compared to the same period in 2021, reaching JD5044.1 million.

- Trade in Services: Jordan’s economy is described as a service economy, which is why further attention must be paid to the competitiveness of service sectors both domestically and internationally. Besides the tourism sector, there is a need to seize on other service sectors, such as financial services and ICT services that keep pace with developments in the digital economy space, and the transport sector, which offers enormous potential given Jordan’s geographical location along the trade routes.

During (2010-2019), the services balance recorded average annual surplus of 5.1% of GDP, compared to an average deficit of 0.2% during (2000-2009). In 2020, however, the services trade balance showed a deficit of 1.3% for the first time since 2005 due to COVID-19 pandemic. The balance recorded a surplus of 0.8% again in 2021. The service balance continued to attain a surplus of 2.4% of GDP during the first half of 2022, compared to a deficit of 1.6% during the same period in 2021.
Assumptions Underlying the Macroeconomic Framework (2023-2025)

- Maintaining and expanding levels of domestic and foreign private direct investment.
- Maintaining the current level of capital expenditures over the next three years.
- Maintaining financial and monetary stability and adequate levels of foreign reserves at the Central Bank of Jordan.
- Continuing the implementation of fiscal reforms by reducing the deficit and limiting the growth of public debt and its service burdens.
- Achieving sustainable growth in exports over the next few years.
- Better global economic conditions in terms of supply chains, energy and food prices, and growth rates.
- The continued presence of Syrian refugees as a long-term phenomenon not a temporary one.

Main Features of Economic Modernisation Vision

Executive Program (2023-2025)

- A living and flexible document that will be reviewed and revised annually in line with the developments, in a complementary manner with the Economic Modernisation Vision Document and the Public Sector Modernisation Roadmap.
- A participatory Executive Program through four ministerial committees and (22) task forces across agencies.
- The Executive Program includes (182) initiatives, selected from approximately (380) initiatives identified in the Economic Modernisation Vision.
- The Executive Program includes (406) priorities with a specific timeframe for implementation.
- Priorities include policies, procedures and projects for each driver and sector.
- Adopting prioritization criteria in terms of project readiness for implementation, identifying owners, and funded from the public budget or foreign aid.
- Priorities consistent with the key objectives of supporting economic recovery and growth, creating job opportunities, and promoting participation.
- Reviewing, revising and enacting (45) legislations.
- Alignment with the Economic Reforms Matrix, Sustainable Development Goals, and sectoral strategies and plans.
- Priorities related to women economic empowerment and increasing women economic participation.
- Action plans to improve Jordan’s ranking in international indicators and reports
- Setting macroeconomic targets 2023-2025.
- An electronic system to monitor performance and achievement through the Prime Ministry Delivery Unit (PMDU) (to be rolled out in two phases), defining performance and achievement indicators and an (Online Dashboard) that will be accessible by the public.

Women Empowerment Initiatives in the Executive Program

for the Economic Modernisation Vision, Priorities (2023-2025)

- Implementing the Women Empowerment Strategy in the Economic Modernisation Vision, which was launched on 4/12/2022
- Reviewing the laws and regulations to enhance women economic empowerment
- Developing and implementing an action plan to improve Jordan’s ranking in the Global Gender Gap Index
- Implementing the action plan to improving Jordan’s ranking in the Women, Business and the Law Report
- Developing a national index to monitor and track women economic participation

Impact of the Initiatives on Women Empowerment:

Direct impact: 72%
Indirect impact: 28%

Objectives

- Develop Jordan into a regional industrial hub through high growth exports with high quality and value products
- Achieve excellence in services sectors to enhance national development and increase exports of services on regional and global levels
- Position Jordan as a prime tourism and film production destination
- Develop and prepare local talents to meet the needs of future skills, required resources and institutions to accelerate economic growth and enhance quality of life
- Optimise the use of natural resources to ensure sustainability, unleash inclusive sectoral growth and enhance quality of life
- Stimulate domestic and foreign investments through an attractive and efficient investment and doing business ecosystem
- Support sustainable practices as a pillar of Jordan’s future economic growth and enhance quality of life
- Improve quality of life for Jordanians through developing and adopting higher life standards that revolve around the citizen and the environment

Mechanism for Monitoring Progress
of the Executive Program

The Prime Ministry Delivery Unit (PMDU) will monitor the progress and delivery of the initiatives and priorities outlined in the Executive Program for the Economic Modernisation Vision. PMDU will provide all forms of technical support to overcome any obstacles that may arise during implementation.

Monitoring Performance in the Implementation of the Economic Modernisation Vision

The process of monitoring the implementation of the of Economic Modernisation Vision shall be carried out along two parallel tracks to achieve the desired outcomes and goals.

1. Monitoring the delivery of the Vision Executive Program for all initiatives and priorities outlined in the Program via the PMDU follow-up and evaluation team. The progress of the implementation of initiatives and projects will be monitored by liaison officers and delivery units established in the ministries and government institutions for this purpose.

2. Monitoring the implementation of high-priority projects, so that these projects are closely monitored through PMDU team on a daily basis. PMDU will provide all forms of technical support to overcome any obstacles that may arise during implementation.

Online Government Performance Monitoring System

An online system has been deployed to monitor performance and achievement. All parties involved will utilize the system to provide periodic reports and update data on work progress within the priorities and projects outlined in the Executive Program.
